

Energy Sources (1/3)

1) This idea will allow you to see the various energy sources (solar, wind, coal) that your vehicle is using to charge and discharge back to the grid.

Energy Sources (2/3)

2) You can see how much of your V2G schedule uses renewable energy and how much carbon was saved.

Energy Sources (3/3)

3) You get a better sense of how often your vehicle charges up with renewable energy and how often that stored renewable energy was used by the grid.
