Energy Sources (1/4)

**1)** First, you connect your car data and your V2G schedule from your utilities.

Energy Sources (2/4)

2) You will be able see the various energy sources (solar, wind, coal) that your vehicle is using to charge and discharge back to the grid.

Energy Sources (3/4)

3) You can see how much of your V2G schedule uses renewable energy and how much carbon was saved.

Energy Sources (4/4)

4) You get a better sense of how often your vehicle charges up with renewable energy and how often that stored renewable energy was used by the grid.
